

Eight reasons to choose a GCH Tool Group Truing Unit

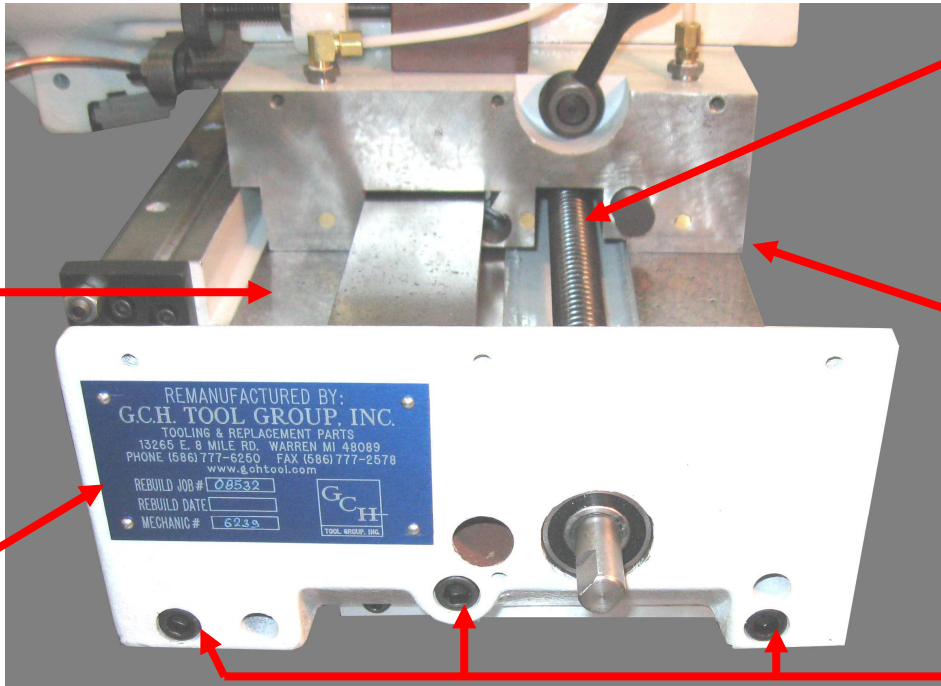

1 New hydraulic motors and directional control valves

2 The cam mounting surface is re-ground flat for accuracy.

3 New fasteners, hoses, fittings, bearings, lube block, and seals.

5 GCH artisan's hand scrape the entire way surface to 5 times better geometry than the OEM specifications.

7 This job tag attached to every GCH assembly provides a fingerprint to the quality test results for each unit.

4 New ballscrews take the place of old acme screws.

6 We will add cast iron wear plates or turcite pads to bring the diamond centerline back to the OEM centerline height.

8 You will never see these casting holes elongated by GCH because we don't take short cuts on quality.
